VALVES

# BAGHOUSE

## POWER GENERATION SEGMENT SOLUTION

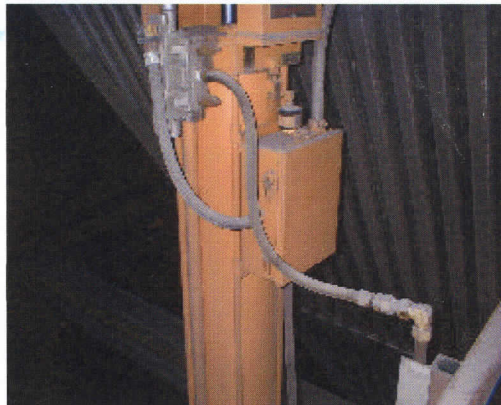

### Applications

Valves actuate an air cylinder that opens and closes gates to purge the ash.

Valves provide a short burst of air which breaks the dust cake, and the dislodged dust falls into a storage hopper below.

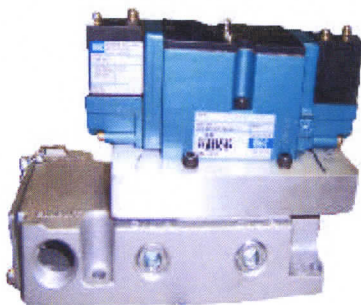

### Challenges

- Dust contamination
- Direct mount to existing valve base

### Solution

MAC 82, 6300 & 6500 series valves. A custom transition plate allows utilization of existing valve base and plumbing.

### Customer Benefits

- Replacement for obsolete Mosier valve
- Easy transition
- Utilize existing valve base and plumbing
- More reliable valve

### Cost Savings

Savings realized in labor cost and replacement of parts.
