

MAC

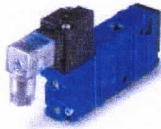

VALVES

Food/Washdown Resistant Modifications

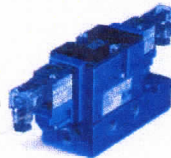

Description for All Modifications:

- Spool, D-seals & poppet made from special water-resistant compound
- Dow 3452 "Sticky" water resistant grease applied to valve & pilot body
- All electrical connections (Body to base, pilot to main valve) coated with Dow #4 silicone dielectric
- Dow #510 silicone on solenoid assembly
- Booted non-locking override. (If customer requires locking override, there are none available rated for washdown - not recommended unless protected in an enclosure)
- A/C coils must 5.4 watt rated coils or higher to prevent sticking when contamination enters poppet
